

Cadence trade-off with the reference base curve

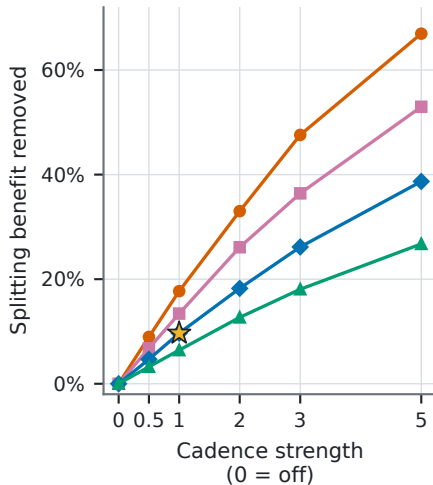

Fixed parameters: 7% peg haircut · exponent 2.5 · wall sensitivity 2.0

Known trade-off: every successful sell advances cadence, so cheap sells can worsen a later quote.

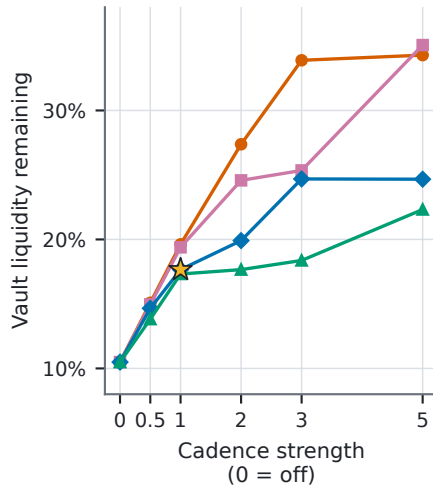

(a) Price after one large sale

(b) Split mitigation

(c) Vault liquidity left

Panels (b) and (c): cadence penalty reaches its configured maximum:

Full after 5 sells (orange circle) Full after 10 sells (pink square) Full after 20 sells (blue diamond) Full after 40 sells (green triangle) ★ Reference setting (yellow star)
